

This course enables attendees to learn the basic elements to implement and manage a Business Continuity Management System (BCMS) as specified in ISO 22301. During this training course, they will be able to know the different modules of a BCMS, including BCMS policy, procedures, performance measurements, management commitment, internal audit, management review and continual improvement.

As an international standard for Business Continuity Management System, the ISO 22301 is designed to protect, reduce the likelihood of occurrence, prepare for, respond to, and recover from disruptive incidents when they arise. With a Business Continuity Management System, your organization is prepared to detect and prevent threats.

ISO 22301 enables you to respond effectively and promptly based on the procedures that apply before, during and after the event. Implementing a Business Continuity plan within your organization means that you are prepared for the unexpected. Business Continuity Plan assures you that your organization will continue to operate without any major impacts and losses.

At the end of this course, participants should be able to:

- Learn about the elements and operations of a Business Continuity Management System (BCMS)
- Acknowledge the correlation between ISO 22301 and other standards and regulatory frameworks
- Know the approaches, methods and techniques used for the implementation and management of a BCMS
